

Sameer Kumar

About

A systems-focused polyglot engineer who enjoys modernizing messy platforms, scaling products, and turning complex problems into clean, maintainable systems — while owning the hardest parts along the way.

Experience

Zensar Technologies , Senior Engineering Lead	Pune, India (Remote) July 2026 – present
Sedin Technologies , Senior Technical Consultant	Bengaluru, India May 2021 – July 2026
Mindfire Solutions , Software Engineer	Bhubaneswar, India Apr 2019 – May 2021

Community

Speaker , RubyConf India 2022 & 2025	DSLs in Ruby 
Technical Blog , 100K+ reads on engineering & consulting topics	Medium Articles 

Skills

Languages: Dart, Elixir, Java, JavaScript, Python, TypeScript, Ruby

Databases: Firebase/Firestore, MongoDB, MySQL, PostgreSQL, SQLite3

Frameworks: Angular, Django, Express, FastAPI, Flask, Flutter, NestJS, React/Next.js, Ruby on Rails, Vue

Design: Bootstrap, Figma, PrimeFaces, Material, Mantine, Radix, SCSS, Tailwind

DevOps: AWS, Docker, GCP, GitHub, GitLab, Jira/Bitbucket

AI/LLM: Claude, GPT, Gemini, Agentic Workflows, MCP, RAG, Vector Databases, Semantic Search, Knowledge Graphs, Prompt Engineering, Context Engineering, AI Evaluation, Sentiment Analysis

Projects

AICreate (US)	Sept 2025 – present
----------------------	---------------------

- Migrated a monolithic Django system to Django REST Framework with a React/Remix frontend.
- Hand-rolled server-side rendering of Remix pages via Django route handlers for incremental migration.
- Optimized queries for up to 10x speed and memory improvement on heavy analytics and data-table pages.
- Implemented client- and server-side caching and invalidation strategies.
- Migrated multiple jQuery-based UI plugins to React equivalents, optimized for virtual DOM rendering.

Subscribili (IN)

June 2025 – Sept 2025

- Built dental subscription-management dashboards for patients and providers, unified in a composable, plug-and-play monorepo.
- Designed a bespoke component system using Radix and Tailwind.
- Implemented strong caching strategies to enhance UX and contributed to the platform's microservice migration.

KCH (UAE)

Jan 2025 – June 2025

- Migrated a Windows-based patient registration application to an on-prem private cloud.
- Configured and deployed the application across multiple environments using Arcon PAM.
- Re-architected the application from HL7 to FHIR.
- Delivered Oracle Millennium FHIR integration for custom OAuth, patient data, and appointment management.

Engie (FR)

Nov 2024 – Jan 2025

- Led a Ruby on Rails team migrating a suite of 5 Rails applications from version 4 to 7.
- Upgraded the GitLab pipeline and Docker setup for the migrated monolith and supporting microservices.

SITA - DigiHub (EU)

Nov 2023 – Sept 2024

- Led the front-end team building a multinational airline and airport data-aggregation platform.
- Migrated the platform to Angular v18 with a microservices approach, sourcing data from Microsoft, ServiceNow, and Salesforce.
- Integrated Azure B2C auth, storage, Power BI, and SharePoint.
- Led a brand-level redesign, implemented as an Angular component library using PrimeNG and Tailwind.

GAEA - Extio (IN)

Sept 2022 – Aug 2023

- Built an adaptive scheduling algorithm for activities and resources in the project management system.
- Modernized a legacy Express codebase and implemented a policy-based authorization layer for access control and user impersonation.
- Developed the v2 backend with MongoDB and NestJS, retrofitting Jest and Playwright test coverage.
- Implemented the new scheduling UI with Angular, Bryntum Gantt, and PrimeNG.

Exeter - Kriyadocs (IN)

Mar 2022 – July 2022

- Built a React library using ProseMirror (Remirror) for collaborative rich-text editing.
- Set up GitLab CI/CD and a private npm registry for the library.
- Developed a new dashboard consuming the library, using LibXML, Y.js/WebRTC, Bootstrap, and Fastify APIs.

ClinicalMind - DNA (US)

May 2021 – May 2022

- Enabled SSR for React components within a Rails monolith and refactored it into manageable engines.
- Built an SFTP hot-folder configuration for report processing and data ingestion.
- Built a Java Spring Boot application for Word and PowerPoint processing using the Aspose toolchain.

Collectively - theAmplify (US)

Apr 2019 – May 2021

- Built data-visualization dashboards using Google Data Studio and Looker to track social media and influencer performance in real time.
- Developed services for creator analysis — anomaly detection, demographics analysis, and content sanity checks — in Ruby and Python.
- Built an NLP utility for sentiment analysis, user clustering, and topic weighting using Google AutoML and Ernie RPC-based servers.
- Upgraded a Rails v4 application to a modern Webpacker-based Rails 6 setup and integrated SSR React for complex interactivity.
- Migrated a legacy class-based React codebase to TypeScript-based functional components with styled components.

Education

B.Tech **Silicon University**, Computer Science and Engineering

Bhubaneswar, India
2015 – 2019
